Glass

Customer Testimonial

"I have worked in the auto glass industry for +8 years, and recently expanded into ADAS calibrations due to the increased number of vehicles needing safety features recalibrated.

I connected with Gary in the spring of 2023 through the Autel website via email. With Gary's help I purchased an IA600 in the Fall of 2023. After receiving my equipment, my wife and I flew out to the training facility north of Boston.

The training was great, I learned all I needed to start calibrating and invoicing the body shops and customers I service.

Learning about ADAS think has helped me understand what needs to be recalibrated on the vehicles in order for them to run as safe as possible for my customers.

Using the Autel system is easy and fast. I am able to calibrate virtually any vehicle that needs

to be done. If I do run into issues and need some advice or help on what to do next, I know I can always call for help.

Gary has always answered or returned my calls right away and always helps me figure out the problem I have.

I have never experienced such hands-on training and continued support following training as I did with Gary and his team. They are always there for you every step of the way.

From the time you decide to purchase your equipment, when you receive it, when you get trained, and following your training. He does not disappear on you and is always willing to help you if you run into issues or need advice.

Thank you so much again to Gary and his team."
